## 당 DEFINITION AL157394 ACCESSION REFERENCE SOURCE KEYWORDS COMMENT ORGANISM JOURNAL AUTHORS FEATURES Direct Submission 2001) Sanger Centre, Hinxton, Cambridgeshire, Submitted (22-AUG-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK E-mail enquiries; humquery@sanger.ac.uk Clone requests: Clonerequestesanger.ac.uk replaced gi:14161146. The puring sequence assembly data is compared from overlapping clones. On Aug 31, 2001 this sequence version replaced as variations of the overlapping clone name. Note that the puring sequence assembly data is compared from overlapping clone saw an anotation annotation may not be found in the sequence submission where was an anotation any otherwise noted: all corresponding to the overlapping clone, as we submit sequences with together with overlap as described above. This sequence was finished as follows unless otherwise noted: all corresponding to the overlapping data (i.e., phred quality >= the sequence was finished as follows unless otherwise noted: all regions were either double-stranded of ata (i.e., phred quality >= the sequence was finished as follows unless otherwise noted: all regions were either double-stranded of ata (i.e., phred quality >= the sequence was finished as follows unless otherwise noted: all regions were covered by high quality data (i.e., phred quality >= the sequence was finished to resolve all sequencing problems, such regions were either double-stranded or all subclone; and the as compressions and repeats; all regions were covered by the least one phasmid subclone or more than one M13 subclone; and the as compressions are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL: Sw:, assembly was core table with their source databases: BASE COUNT ORIGIN Query Match Best Local Similarity source 187313 bp DNA linear PRI AL157394 uman DNA sequence from clone RP11-399019 on chromosome misc\_feature complete sequence. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                            A novel DNA segment (AAT34162) has an isolated sequence region defined as the Fas gene promoter region. This includes a number of transcription factor binding sites. A coding sequence for latent partion (AAR99471) of the Fas protein leader peptide corresponding to nt 23-246. It can be combined with a structural transcription factor binding sites. The promoter region can be completed from a means of treating Fas mediated apoptosis disorders such as means of treating Fas mediated apoptosis disorders such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such experiences, anaemia, cancer, oute myeloid macular degeneration, afteriosclerosis, anaemia, cancer, courte including eye diseases, after of the invention. The macular degeneration of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                             AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The called human colon cancer antigens can have cytostatic, cardioactive, muscular; human colon cancer antigens can have cytostatic, cardioactive, muscular; human colon cancer antigens can have cytostatic, gastrointestinal, neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and vulnerary, nephrotropic, antiinfective and antibacterial activities, and research the prevention, can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibacdies to the proteins are useful for the prevention. The treatment and diagnosis of colon disorders, such as colon cancer. The treatment and diagnosis of colon disorders, such as colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Colon cancer associated gene sequences, referred to as colon cancer antigens, useful for the treatment, prevention, and diagnosis of colon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ъ
                                                                                                                                       This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor intron 1 which contains a p53 bind

       The present sequence encodes human Fas (Apo-1). The specification describes antisense compounds which are targeted to the 5'-untranslated region, translational start site, translational termination region of 3'-untranslated region of nucleic acid molecules encoding Fas, Fas phosphatase). The antisense compounds are used to inhibit the expression of Fas, Fast or Fap-1 in cells or tissues. They are used to treat autoimmune or inflammatory diseases such as hepatitis. They can also be used to treat cancer, especially colon, liver or lumphorms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAC61798

```
New nucleic acid encoding Fas protein without its trans-membrane region - and related vectors, transformed cells, transgenic animals, protein and antibodies, useful for control of Fas mediated apoptosis
mRNA was obtd. from human lymphocytes and PCR was used to make CDNA specific for Fas-delta-TM (i.e. Fas lacking the transmembrane region) mRNA. The PCR product was ligated into pBluescript and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δõ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                response in a cell mixture by administering an immunosuppressive agent which inhibits the proinflammatory activity of Fas ligand (FasL). In some embodiments, FasL is coadministered with the immunosuppressive agent, and the cell mixture comprises or neutrophil cells. The method can be practised in vitro, so vivo or certain vivo. Suitable immunosuppressive agents include antisense or ceptors, ribozymes that inhibit endogenous FasL expression, soluble Fas cereptors, ribozymes that inhibit the endogenous expression of cell endogenous expression of cell endogenous expression of cereptors, ribozymes that inhibit the endogenous expression of cell endogenous expression of transforming growth factor (TGF)-beta, cell endogenous expression of transforming growth factor (TGF)-beta, cell endogenous expression of transforming growth factor (TGF)-beta, cell endogenous expression of cell endogenous expression

The cDNA was ligated to BstXI-cut vector pcEV4 via BstXI linkers. The KT3 cDNA library was used to transfect monkey coscatis which were then suspended in buffer containing murine anti-Pas attibodies. The Fas expressing cells adhered with goat anti-mouse Extrachromosomal DNA was prepared from adhered to the plates. Transform E.coli vM100 cells. A 520bp XhoI-BamHI fragment from a longest cDNA clone was designated pF58 and contains an ORF corresp. Loa 335 amino acid pre-protein and a 319 amino acid mature protein (i.e. human Fas antigen).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO9601277-Al
                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the coding sequence for the human Fas antigen contained within the plasmid pCEV4/DFas. The soluble Fas antigen is included in the immunoassay kit of the invention. The kit is for the included in the immunoassay kit of the invention. The kit is for the say of soluble Fas antigen and contains an immobilised anti-soluble Fas assay is stendard soluble Fas antigen encoded monoclonal antibody, as well as the standard soluble Fas antigen encoded by this sequence. The assay is simple and has high accuracy, high sensitivity, and is capable of assaying a number of different specimens at the same time. The immunoassay is used on biological samples (such as serum) and is useful for diagnosis of autoimmune diseases such as rheumatoid arthritis or systemic lupus erythematosus (SLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-JUL-1994;

CC The present sequence represents a Fas cDNA sequence used in the CC depletion of activated Fas-expressing CD8+ T-lymphocyte killer (TK) (FasL)-expressing activated Fas-expressing CD8+ T-lymphocyte killer (TK) (FasL)-expressing activated CD4+ cells. It involves contacting this CC immune cell population which would interfere with the CC interaction between Fas and FasL. Therefore, the method is useful for CC is the use of the agent which can reduce depletion of activated CC is the use of the agent in the manufacture of therapeutic compositions. Also claimed CC cell surface receptor Fas and its ligand FasL. By interaction of the CC apoptosis of lymphocytes can be triggered by the interaction of the CC apoptosis of CD8+ TK lymphocytes caused by expression of FasL on activated CD4+ cells. Such FasL-expressing activated CD4 cells useful the result of CD4- FasL-expressing activated CD4+ cells of CD4- cell infection with an immunodeficiency virus (SIV). The claimed prevention of apoptosis may then allow treatment (prophylactic and/or therapeutic) of immunodeficiency compositions activated CD4+ cells in fection of apoptosis may then allow treatment (prophylactic and/or therapeutic) of immunodeficiency crus diseases e.g. AIDS.
                                                                                                                                                                                                                                                                                                                                                                           Reducing CD8+ lymphocyte apoptosis to treat e.g. immunodeficiency diseases - by interfering with interaction of Fas with Fas-ligand expressed on activated CD4+ cells, e.g. cells infected with HIV

The derivatives are effective regulators of apoptosis and can be used (either by administration of the polypeptide, for by the use of the coding DNA in gene therapy) to treat a range of diseases, of the coding DNA in gene therapy) to particular viral diseases e.g. diabetes, arthritis, lupus and in particular viral diseases such as hepatitis, influenza and HIV, by modulating apoptosis of such as hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2534 BP; 817 A; 491 C; 499 G; 727 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes immunogenic portions of lung tumour-associated proteins (I) and the nucleic acids (NAs) that encode them. (I) have cytostatic activity and can be used in gene therapy, antisense (I) have cytostatic activity and can be used in gene therapy, antisense inhibition and in vaccines. The NAs and the lung tumour-associated inhibition and in vaccines. The NAs and the prevention, treatment and proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with their inappropriate expression, diagnosis of diseases associated with their inappropriate expression, especially lung cancers. For example, the NAs may be administered to especially lung cancers. For example, the NAs may be administered to that affect the activity of the protein by expressing inactive proteins that affect the activity of the protein by expressing inactive proteins that affect the activity of the protein of (I). Additionally, the or make may be used to represent the patients own production of (I). Additionally, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NAS may be used to produce the lung-tumour associated protein, according to standard recombinant DNA methodology. Conversely, antisense NA molecules may be administered to down regulate protein expression by molecules may be administered to down regulate protein expression. The NA binding with the cells own genes and preventing their expression. The NA binding with the cells own genes and preventing their expression. The NA binding with the cells own genes and preventing their expression. The NA since the complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar NA sequences in assays and hence which patients may be in need of treatment for lung samples, and hence which patients may be in need of treatment for lung and in assays to identify modulators (agonists and antagonists) of the and in assays to identify modulators (agonists and antagonists) of the and antagonists to AAB768878 represent human lung tumour protein related AAB76848 to AAB76878 represent human lung tumour protein related and protein sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4; Page 415-416; 436pp; English.

                                                                                                                       The present sequence represents an oncogene from the present invention. The present invention describes a composition which comprises two cytoplasmic oncogene or proto-oncogene selected from ras, raf, EGF-1, C-yes. The second oligonucleotide is specific for a proto-oncogene selected from ras, raf, EGF-1, proto-oncogene selected from myc, jun, c-ets, c-for a nuclear oncogene or c-rel, c-wav, c-ski, c-spi, cyclin Dl, pML/RAR alpha, AMLL/MTGS, The combination of antisense oligonucleotides has synergistically enhanced ability to inhibit growth of cancer cells.

Result
No.
                                                  pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (22-AUG-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Cione requests: clonerequest@sanger.ac.uk crows control of this sequence version replaced gi:14161146. Together with a note of the overlapping clone name. Note that the where differences are found thas are annotated as variations corresponding to the overlapping clone, as we submit sequence with a note of the overlapping clone name. Note that the rail as sequence was finished as follows unless otherwise noted: all as compressions were either double-stranded or sequenced with an alternate one plasmid subclone or more than one will sequence with an alternate one plasmid subclone or more than one will sequencing problems, such abbreviations are used to associate primary accession numbers given the feature table with their source databases: Em; EMBL; Swisspror. Tr.; TREMBL, Wp: was generated from part of bacterial clone contigs of human http://www.sanger.ac.uk/Projects/C-elegans/wormpep This sequence http://www.sanger.ac.uk/Eprojects/C-elegans/wormpep This sequence http://www.sanger.ac.uk/Epro
